                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chouse were identified by a combination of several methods: Gene prediction programs including Genscan+ (Chris Burge, http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), GilmmerA (a variant of GlimmerM, see Mihaela Pertea, http://www.igir.org/schilab/glimmerm.html, and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TiGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with BST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypotherical proteins. Genes encoding tRNAs are predicted by KRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/ENAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://ttp.genome.washington.edu/RM/Repeatmasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /codon_start=1

Quality coverage: 2.65 in Q20 bases; agarose-fp estimation
* NOTE: This is a "working draft' sequence. It currently
* consists of 77 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

NOTE: This is a 'wow.ing draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising:

(a) conteacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abloric stress; The present sequence is that of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used in methods of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.

The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gens and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention on be used: for invention. Oligonucleotides from the present invention can be used: for discrete haematopoietic cells; for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cytosine methylation state-and/or-single-nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and/or single-nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation of secent invention can subclasses, diagnosis, prognosis, treatment and/or contacting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders The present method enables chaematopoietic cell proliferative disorders The present method enables can highly specific classification of haematopoietic-cell proliferative disorders allowing for improved and informed treatment: of patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1091 TITITCCATAAATTAAAGTAAATCTTTTTTGCCTAACCAATAAAATTATTGAAAATC 1150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a target nucleic acid with a reagent that distinguishes between methylated and non-methylated CpG dinucleotides
                                                                                                                                                                      Haematopoietic cell proliferation disorder related DNA sequence #386.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of Arabidopsis thaliana SSE1 (shrunken seed) cDNA, which was isolated from a seedling cDNA library using a partial genomic clone as probe. SSE1 encodes a protein (see AAB19/19) that, when expressed in a cell of a plant, modifies or alters the production of a food storage reserve material (e.g. protein, lipid or carbohydrate storage reserve), facilitates the intracellular transport of a storage protein, or facilitates the formation of protein or oil bodies. The invention provides a transgenic plant (or plant cell, plant tissue, plant organ or plant component) which includes a recombinant SSE1 transgene that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        modifies the production of food storage reserves, thereby increasing nutritional value. An antisense construct is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 242.4; DB 21; Length 1483; Pred.                                                                                                                                                                                                                                                                                                              (AAL07544-AAL26789) and methods of assessing whether a patient is affilted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and polynucleotides are constraint to the polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to human breast cancer expressed polynucleotides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy.
                                                                                                                                                                                         92
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cervical cancer, cytostatic, pre-malignant condition, gene therapy, ss.

New nucleic acid fragments from chemically treated angiogenesis-associated genes, useful for determining methylation status, e.g. in diagnosis or treatment of cancer

Claim 1; SEQ ID NO 154; 41pp + Sequence Listing; German.

The invention relates to a nucleic acid (I) comprising a segment of 18

bases of chemically pretreated DNA of anglogenesis-associated genes (II) having sequences (Abg66971-Abg67178) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in anglogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, eneovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis, diabetic retinopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and Crohn's disease.

Note: The sequence data for this patent did not form part of the printed

The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopais thallana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            e data for this patent is not represented in the printed is based on sequence information supplied to Derwent by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention relates to identifying a stress condition to which a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cell has been exposed, comprising:

(a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid caid can specifically hybridise to a second nucleic acid molecule comprising any of 1512 nucleotide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid inked to a promoter and a 3' nontranslated sequence that functions in the cell to cause termination of translated sequence that functions in the cell to cause termination of translation and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule, and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker
                                                                                                                                                                           351
                                                                                                                                                                                                                                                                                                                                                                                                              290 GAGAAAGGTTTTTGTTGCAAATTAGTCATGAACTCACATTATCAAACGAGGTGAAATGAC 231

The LWED nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle bredding, preparation of constructs for use in cattle gene expression, or for generically improving cattle. The present sequence is one of the 1512 bovine LMED EST (expressed sequence tag) nucleic acids.
nucleic acid (comprising any of the 15112 nucleic acid sequences or its

```
The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer; in particular an oligomuclectide or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription (particularly with the methylation status), e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sezary syndrome, thematological disorders, Menunological disorders, Warrer syndrome, thermorphopental disorders, postiasis, Rieger's syndrome, unemann-Pick disease, myclodysplastic syndrome, mycentension angiogenesic syndrome, mycentension angiogenesic syndrome, mycentension angiogenesic syndrome, solid tumours disease, HDR syndrome, arthitis, polyglutamine disorders, solid tumours associated genomic DNA molecules of the invention.

Note: The sequence AbK20127-AbK28472 represent DNA transcription associated denomic DNA molecules of the invention.

Note: The sequence data for this patent did not form part of the printed formed part of the printed forms between the format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1084 TTACAGCTTTTTCCATAAAATTAAAGTAAATCTTTTTTTGCCTAACCAATAAAATTATT 1143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1144 GAAAATCTTTCCAACCATAGAAAAGTTAAATTTGATCAGCGATGGAAATTTTTGTACAAA 1203

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle-and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CPG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing oytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HIV infection, neurodegenerative disorders, graft-versus-host disease, arteriosclerosis, solid tumours and cancers.

New nucleic acid, oligonucleotides and peptide nucleic acid-oligomers, useful for detecting cytosine methylation state of genes associated with pharmacogenomics and for therapy of diseases e.g. cancer

Claim 1; SEQ ID No 58; 24pp; English

The invention relates to a nucleic acid comparising a sequence at least 18 bases in length of a segment of the chemically pretreated DNA of genes associated with pharmacogenomics according to one of the cequences of the genes ALD pharmacogenomics according to one of the sequences of the genes ALD pharmacogenomics according to one of the sequences of the genes ALD NR 000593, CYP1A (NM 000491), CYP1B1 (NM 000497), CYP3A3 (NM 005939, TXNRD1 (NM 001979), CCLM (NM 001979), CCLM (NM 001979), CCLM (NM 0019901, NM 019862, NM 019862, NM 019862, NM 019862, NM 019869, NM 019869, and their complements. The chemical pretreatment for shell pharmacolles (SI) chosen is bisulphite treatment to convert cytosines (but not methyl-cytosines) into uracils. Also included are an oligomer (II) in particular an is bisulphite treatment to convert cytosines (but not methyl-cytosines) into uracils. Also included are an oligomer (II) in particular an oligomer, comprising in each case at least one base sequence having a length of 9 nucleotides which hybridises to or is identical to a chemically pretreated DNA of genes associated with the methylation state (CpG) and/or detecting SNPS (single nucleotide polymorphisms) an array for analysing diseases associated with the methylation state (CpG) and/or detecting SNPS (single nucleotide polymorphisms) coff the 87 sequences. The oligomers may also be used as PCR primers: The set of 87 nucleic acids and their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence

The invention relates to a nucleic acid, which comprises a segment of the chemically pretreated DNA of genes associated with DNA transcription from one of 346 sequences, and an oligomer that hybridises to or is identical to peptide nucleic acid (PNA) -oligomer that hybridises to or is identical transcription. The set of oligomer probes are useful for detecting the transcription. The set of oligomer probes are useful for detecting the crimically pretreated genomic DNA. The nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleotide polymorphisms (SNPs) in a chemically pretreated genomic DNA. The nucleotide polymorphisms (SNPs) in a chemically with the methylation status), e.g. adenosine deaminase deficiency, viral infection, retroviral infection, Sezary Syndrome, haemacological disorders, immunological disorders, where syndrome, neurological disorders, immunological disorders, wardenburg syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial infection, hypertension, anglogenesis, erythropolesis, companital heart disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours or cancer. Sequences ABK28127-ABX28472 represent DNA transcription associated genomic DNA molecules of the invention.

Subscribed and for this patent did not form part of the printed specification but was obtained in electronic format directly from the

differentiating between harmatopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nuclaic acid in a biological sample obtained from the subject with at least 1 reasont, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. AE209861 to AE211118 circleotides within the target nucleic acid. AE209861 to AE211118 circleotides within the target nucleic acid. AE209861 to AE211118 circleotides within the target nucleic acid. AE209861 to AE211118 circleotides within the target nucleic acid. AE209861 to AE211118 circleotides within the target nucleic acid. AE209861 to AE211118 circleotides within the larget nucleic acid. AE209861 to AE211118 circleotides within the larget nucleic acid. AE209861 to AE21118 circleotides and acute myelogenous leukaemia, as probes for disorder haematopoietic cells for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia, as probes for determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables chaematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders. The present method enables contacras allowing for improved and informed treatment of patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5153
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5093

The invention relates to a nucleic acid comprising a sequence of at least 18 bases of a segment of chemically pretreated DNA of genes associated with cell signalling. The activity of the modified sequences of the invention may be described as cytosfactic. The object of the invention is to provide the chemically modified DNA of genes associated with cell capability as well as oligonacleotides and/or PNA-oligomers for detecting cytosine methylations, as well as a method which is particularly suitable for the diagnosis and/or therapy of genetic and particularly modified DNA provided by the invention is useful for diagnosis of interapy of diseases such as sociated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis of interapy of diseases such as sociat them and cancer. The sequences given in records ABL70111-ABL7065C represent chemically pre-treated genomic DNA's of genes associated with cell signalling of the printed specification, but is based on sequence information supplied by the Interpretation better office.

TITLE

```
/clone_lib="Arabidopsis thaliana T-DNA insertion lines"
/clone_"PCR was performed on DNA from Arabidopsis thaliana
plants (TI) which were transformed with the T-DNA from
vector pAC16. The lines contain one or more T-DNA
insertions. The DNA fragment(s) resulting from the PCR
were directly sequenced to determine the genomic sequence
flanking the insertion. Sequences displaying significant
similarity to the A. thalaina nuclear genome sequence
processed for submission. T-DNA derived sequences were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Arabidopsis thaliana (thale cress)

Alonso, J.M., Leisse, T.J., Barajas, P., Chen, H., Cheuk, R., Gadrinab, C., Jeske, A., Karnes, M., Kim, C.J., Parker, H., Prednis, L., Shinn, P.
                     Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany This sequence is recovered from the left border of the T-DNA. It indicates an insertion within the locus defined by clone f418. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               624

An Arabidopsis full-length oDNA library was constructed essentially
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI
and XhoI was ligated to modified.Lambda FLC-1 vector (Carnincl et
al., submitted for publication) digested with BamHI and SalI. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AV825375 AFL7 Arabidopsis thaliana cDNA clone RAFL07-08-F04 5',

notes"PCR was performed on Arabidopsis thaliana lines
each of which contains one or more TDNA insertion
elements. The resultant fragment for each line was
directly sequenced to determine the genomic sequence at
the site of insertion. Details of the protocols used can
be found at http://signal.salk.edu/tdna_protocols.html"
